

# Welcome to ZERAWARE

*Software produced by a safety professional –  
for safety professionals.*

ZERAWARE was developed to give safety personnel the ability to perform key safety management functions more effectively, utilizing the advantages of computer technology. Combining data management with sound accident prevention applications, ZERAWARE will improve the productivity of any safety program.

ZERAWARE  
consists of three modules:

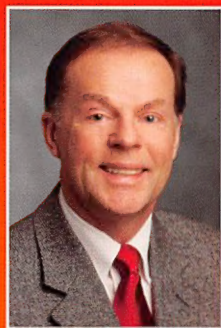

Incident Report

Accident Investigation

Safety Inspections

Safety Management Services, Inc.  
P.O. Box 1606 • Williamsville, New York 14231  
1-800-803-0370

# ZERAWARE<sup>TM</sup>

Safety Management Software

*Safety management software that lets you identify,  
analyze and correct problems better than ever before.*

## Incident Report

The ZeraWare **Incident Report** module will make your accident prevention efforts more efficient and productive. The computerized incident data will allow in-depth analysis and insight into the circumstances and details of past accidents. This software will give you the means to identify potential problems and implement more effective solutions in the future.

## Key features of the Incident Report Module:

- A user-friendly report form that provides important details about an incident or accident that should be documented.
- The Incident Report form allows extensive customization.
- The database of incidents can be searched and sorted in numerous ways to identify patterns or trends.
- Incident report data can be displayed as text tables, graphs or pie charts.
- Incident reports and data can be printed or e-mailed.

## Accident Investigation

The ZeraWare **Accident Investigation** module will improve the quality and usefulness of your accident investigation efforts. Appropriate questions are provided that will allow both direct and contributing causes of accidents to be identified. With better investigations and corrective actions, your ability to prevent future accidents will be greatly enhanced.

## Key features of the Accident Investigation Module:

- Different investigation forms are provided with the appropriate questions for different types of incidents.
- A process for conducting a detailed Root Cause Analysis is included.
- A Corrective Action log is automatically generated that allows corrective actions to be tracked and monitored until completed. Completed corrective actions are also listed.
- Incident investigations can be printed or e-mailed.
- Investigations can be searched and sorted in numerous ways.

## Safety Inspections

The ZeraWare **Safety Inspections** module provides a computer-based method of creating custom tailored safety inspections. The inspection format will accommodate OSHA violations, unsafe conditions, work methods and hazards of any kind. This module will improve your ability to methodically identify and correct hazards in your workplace before they result in accidents.

## Key features of the Safety Inspections Module:

- Customized safety inspection checklists that can be as general or work specific as desired.
- Inspections can be searched and sorted in numerous ways to reveal patterns of violations or hazards.
- This module also has a Corrective Action log that automatically lists inspection items that are found to be unsatisfactory. Accountability for correction is built in.
- Inspections and corrective action reports can be printed or e-mailed.
